

Skin Classic Home Care

After treatment it is common to feel irritation as well as experience redness. Some crusting may form on the areas treated.

If the area is still irritated by the end of the day, a clean bag of frozen peas works well. The peas defrost quickly so usually no chance of skin damage.

IT IS IMPORTANT TO REMEMBER:

- Wash with gentle cleanser and fingertips
- Pat dry
- NO TERRY CLOTH
- Use moisturizing SPF of 30 or higher every day
- Do not get areas wet: wash face at vanity... shower with back to water if face treated, keep hands out of water if hands treated. (Crusts will become soggy and slough too quickly. Crusts are nature's Band-Aids)
- Crusts will slough in 5-14 days depending on the individual (hands on the longer side)
- Do not use any harsh or anti-aging products while crusted
- ABSOLUTELY NO PICKING OR SCRATCHING!
- No procedures in the areas of treatment for 30 days
- After crusts have sloughed and skin is smooth you may resume your skin regime as suggested by your technician
- Areas may continue to be pink until completely healed
- Continue to wear SPF 30 or higher every day!
